PROJECTS

Traffic Management System Using AI

- Main purpose of project is to reduce the manpower needed to control the traffic. Our design system can reduce the chances of such scenarios by automatically computing the optimal green signal based on the current traffic at the signal. Our System will ensure that the direction with more traffic is allotted with a green signal for long duration of time as compared to the direction with less traffic.

Technologies: Computer Vision, Image processing, Deep-learning

Student Results Websites

- Designed a website using HTML5, CSS and SQL where the students of our college can check their semester result and calculate their SGPA & CGPA.
